IN THE CLAIMS:

Please cancel claims 1 – 39, and add new claims 40-52, as follows:

1-39 (Canceled)

40. (New) An electronic device, comprising:

a display housing having a display surface and a rear surface opposite to the display surface, the display housing being made of a conductive material, a nonconductive portion being formed in a part of the rear surface;

an antenna placed in the nonconductive portion; and

a communication unit configured to perform wireless communications by using said antenna.

- 41. (New) The electronic device according to claim 40, wherein said nonconductive portion is covered with a cover.
- 42. (New) The electronic device according to claim 41, wherein said cover is formed of a nonconductive material.
- 43. (New) The electronic device according to claim 41, wherein said cover is removable, and said electronic device further includes a signal output terminal on a signal path between said antenna and said communication unit.
- 44. (New) The electronic device according to claim 40, wherein a perimeter length of said nonconductive portion is equal to or longer than one wavelength of a frequency used in wireless communications.
- 45. (New) The electronic device according to claim 40, wherein said housing is grounded.

- 46. (New) The electronic device according to claim 40, wherein said antenna is provided in a central portion in said nonconductive portion in a width direction.
- 47. (New) The electronic device according to claim 40, wherein said antenna is provided in an upper portion in said nonconductive portion in a vertical direction.
- 48. (New) The electronic device according to claim 40, wherein said antenna projects outward from said housing.
- 49. (New) The electronic device according to claim 40, wherein said antenna includes an antenna substrate and an antenna element provided on said antenna substrate, said antenna substrate including a printed circuit board formed with a conductive pattern for grounding, and said antenna substrate is connected to said housing.
- 50. (New) The electronic device according to claim 49, wherein a perimeter length of the conductive pattern is in a range of about 0.7 to about 1.4 of a wavelength of a frequency used in wireless communications.
 - 51. (New) An electronic device, comprising:

a display housing made of a conductive material, a nonconductive portion being formed in a part of a rear surface of the housing;

a display unit provided in said housing;

an antenna placed in said display housing and facing the nonconductive portion;

a communication unit configured to perform wireless communications by using said antenna.

52. (New) An electronic device, comprising:

a housing made of a conductive material, a nonconductive portion being formed in a part of a rear surface of the housing;

a display unit provided in a front of said housing;

an antenna positioned between said display unit and said nonconductive portion; and

a communication unit configured to perform wireless communications by using said antenna.
